### Introduction

This annual report on execution of the Implementation Plan (IP) by geothermal companies presents the results at the end of 2019 about how much the geothermal industry contributes to this SET Plan activity.

This annual report prepared by EGEC will be updated in January 2021 and January 2022.

The objective is to facilitate the execution and to monitor the implementation of the IP for the industry part. In order to keep the IP up to date, EGEC is liaising with the committed companies and with the ETIP deep geothermal members from the private sector.

Information collected in this annual report is then forwarded to activities on overall monitoring and Synergies & Strategy support (WP6&7) to ensure its treatment and the proper monitoring of the execution of the IP and the improvement to reach the targets. Industry also provides feedbacks on the RD&I public funding programmes available in Europe.

In 2019, we assume a volume higher than € 85 millions ( € 84.674.045,64 just via cofunding of european projects) invested by the private sector in Research & Innovation for deep geothermal.

# Methodology of the deliverable

Building from the SET Plan Deep geothermal priorities for ongoing RD&I activities, the deliverable report on the execution of the Implementation Plan (IP) by companies. It provides also a general presentation of activities performed from private actors. Market actors have been regularly briefed about the 10 RD&I actions as set by the IP: events in The Hague, The Netherlands (EGC2019) on 13 June 2019, and 23 September 2019 in Brussels.

They have also received detailed information with factsheets produced on funding instruments (D4.2)

EGEC is monitoring the IP execution with several tools:

- The annual EGEC Market reports which present market developments in Europe with details on deep geothermal plants: size, capacity factor...
- The series of events organised every year and largely attended by industrial stakeholders such as the 2019 workshop on the Innovation Fund and the European geothermal Congress
- The ETIP DG and ETIP-RHC (geothermal panel): regular meetings with reporting on R&I results
- EGEC annual innovation award "EGIA"

Only activities started after the IP publication (January 2018), or having started before but still ongoing, are considered.

They refer to co-funded projects, with a public and private financial contribution, supported by European programmes such as Horizon2020, Interreg, COSME; supported by National public contribution to European funds such as ERANET: Geothermica and GeoERA. Moreover, when available the report covers major national or trans-national research projects with potential input from companies.

The next version of this reporting will be more exhaustive benefiting from data collection operated by the SET Plan and the IWG annual reports.

# Involvement of private actors in the IP

The SET Plan Temporary Working Group Deep Geothermal Implementation Plan identified 10 areas of priorities for RD&I actions in the deep geothermal sector. These priorities include:

- Geothermal heat in urban areas;
- Materials, methods and equipment to improve operational availability
- Enhancement of reservoir (conventional and unconventional);
- Improvement of performance;
- Exploration techniques;
- Drilling techniques;
- Flexibility from geothermal CHP plants;
- Zero emissions power plants;
- Community and stakeholder acceptance of geothermal projects;
- Risk mitigation.

These various priorities cover a broad range of topics for the deep geothermal sectors and involve all segments of the deep geothermal value chain. Across the different parts of the geothermal value chain, different types of actors are contributing with their own expertise and resources to advancing the priorities for research, development and innovation in the deep geothermal sectors along the lines identified in the SET Plan TWG Deep geothermal Implementation Plan.

For each priority, the scope is briefly described and the typology of actors implementing the SET Plan Deep geothermal RD&I priorities is described.

The listing presents co-funded projects, with a public and private financial contribution, supported by European programmes such as Horizon2020, Interreg, COSME; supported by National public contribution to European funds such as ERANET: Geothermica and GeoERA. Moreover, the report covers major national or trans-national research projects with potential input from companies.

The list inlcuceds also project without private financial contribution, but with activities performed by industry.

Description of Research and Innovation Activity	DG TWG
Title: GEOTHERMAL HEAT IN URBAN AREAS	R&I Activity.1

**Scope:** To enhance the European heat transition to renewable energy by providing geothermal based solutions for urban areas. To contribute to decarbonising energy use for heating and cooling in cities and to improve air quality.

#### **Ongoing R&I Activities:**

#### project CoolHeating:

Market uptake of small modular renewable district heating and cooling grids for communities, from 01-01-16 to 31-12-18

Total budget= € 1.644.340,00

EU contribution - h2020= € 1.644.340,00

Private contribution= € 0

#### project GEOFOOD:

Food production in Europe requires further steps in reducing the carbon footprint. This project showcases the opportunities of direct use of geothermal energy to increase food production in highly productive circular systems.

Total budget= € 1.749.656,00

Geothermica contribution = € 1.249.204,00

Private contribution= € 500.452

#### project GEO-URBAN:

The GEO-URBAN project aims to explore the potential for low enthalpy geothermal in urban environments..

Total budget= € 737.233

Geothermica contribution = € 539,275

Private contribution= € 197.958

#### project DGE-ROLLOUT:

Roll-out of Deep Geothermal Energy in North-West Europe, from 25/10/2018 to 24/10/2022 Total budget= € 18.697.123,46

Total baaget= C 10.007.120,40

EU contribution Interreg= € 11.158.964,07

Private contribution= € 7.538.159,39

TRL at start: 7	TRL at end: 9		
Total budget required: €73.3m		Flagship:	Yes

Description of Research and Innovation Activity	DG TWG
Title: MATERIALS, METHODS AND EQUIPMENT TO	R&I Activity.2
IMPROVE OPERATIONAL AVAILABILITY (HIGH	
TEMPERATURES, CORROSION, SCALING)	

**Scope:** Developing new materials, methods and equipment suitable to solve problems commonly encountered in geothermal applications (resistance to corrosion and scaling) for low and high temperatures; decreasing the overall cost of a geothermal project.

#### **Ongoing R&I Activities:**

#### project Geo-Coat:

Development of novel and cost effective corrosion resistant coatings for high temperature geothermal applications, from 01-02-18 to 31-01-21

Total budget= € 4.722.722,50

EU contribution H2020= € 4.722.722.50

#### Private contribution= € 0

#### project REFLECT:

Redefining geothermal fluid properties at extreme conditions to optimize future geothermal energy extraction, from 1 January 2020 to 31 December 2022

Total budget= € 4 992 761,25

EU contribution H2020= € 4 992 761,25

#### Private contribution= € 0

#### project GEOPRO:

Accurate Geofluid Properties as key to Geothermal Process Optimisation, from 1 November 2019 to 31 October 2022

Total budget= € 4 898 982,50

EU contribution H2020= € 4 898 982,50

#### Private contribution= € 0

#### project GeoHex:

Advanced material for cost-efficient and enhanced heat exchange performance for geothermal application, from 1 November 2019 to 31 October 2022

Total budget= € 4 989 401,25

EU contribution H2020= € 4 989 401,25

#### Private contribution= € 0

#### project MATChING:

Materials Technologies for performance improvement of Cooling Systems in Power Plants, from 01-03-16 to 31-08-19

Total budget= € 11.847.291,75

EU contribution H2020= € 9.706.413,77

Private contribution= € 1.780.877,98

#### project PERFORM:

Demonstration of cost-efficient, next-generation technologies and methods (cation-, particle filters, CO2-injection, thermal stimulation) will enable the reduction of obstructive elements and resistance to fluid injection. Predictive modelling of physical and chemical processes will permit long-term doublet performance projection.

Total budget= € 3.011.717,00

Geothermica contribution = € 2.236.825,00

Private contribution= € 774.892

TRL at start: 5 (Equipment); 4 (Materials)	TRL at end: 9 (Equipment); 6 (Materials)

Total budget required: €25.6m Flagship: No

Description of Research and Innovation Activity	DG TWG
Title: ENHANCEMENT OF RESERVOIR (CONVENTIONAL	R&I Activity.3
AND UNCONVENTIONAL);	

**Scope:** Demonstration of techniques for reservoir improvement in different geological settings and up-scaling of power plants, and/or (industrial) heat production. Development of reservoirs (includingEGS, ultra-deep hydrothermal and petro-thermal) in untested geological conditions with innovative methods for reservoir exploitation.

#### **Ongoing R&I Activities:**

#### project SURE:

Novel Productivity Enhancement Concept for a Sustainable Utilization of a Geothermal Resource, from 01-03-16 to 31-08-19

Total budget= € 6.143.415,00

EU contribution H2020= € 5.892.165,00

Private contribution= € 251.250

#### project DEEPEGS:

Deployment of deep enhanced geothermal systems for sustainable energy business, from 01-12-15 to 30-11-19

Total budget= € 44.057.258,66

EU contribution H2020= € 19.999.740,88

Private contribution= € 24.057.517,78

#### project DESTRESS:

Demonstration of soft stimulation treatments of geothermal reservoirs, from 01-03-16 to 29-02-20 Total budget= € 25.132.511,25

EU contribution H2020= € 10.713.408,63

Private contribution= € 14.419.102,62

#### project MEET:

Multidisciplinary and multi-context demonstration of EGS exploration and Exploitation Techniques and potentials, from 01-05-18 to 31-10-21

Total budget= € 11.736.955,53

EU contribution H2020= € 9.972.818,88

Private contribution= € 1.764.136,65

#### project GEMex:

Cooperation in Geothermal energy research Europe-Mexico for development of Enhanced Geothermal Systems and Superhot Geothermal Systems, from 01-10-16 to 31-05-20

Total budget= € 9.999.792,50

EU contribution H2020= € 9.999.792,50

#### Private contribution= € 0

#### project COSEISMIQ:

improve and validate the advanced technologies for monitoring and controlling induced seismicity Total budget= € 2.479.458,00

Geothermica contribution = € 1.148.958,00			
Private contribution= € 1.330.500,00			
TRL at start: 4	TRL at end: 8		
TRL at Start. 4	TRL at end. o		
Total budget required: € 382.5m		Flagship:	No

Title: IMPROVEMENT OF PERFORMANCE (CONVERSION			R&I
TO ELECTRICITY AND DIRECT U	TO ELECTRICITY AND DIRECT USE OF HEAT)		
<b>Scope:</b> To improve the overall conversion e	efficiency and reduce the co	ost of geothern	nal energy
utilization. To develop an EU technology solu	tion with a perspective to b	ecome a world	lwide standard.
To improve the efficiency of binary cycle pow		•	•
as bottoming cycle and the capability of deali	as bottoming cycle and the capability of dealing efficiently with variable heat and electricity supply.		
Ongoing R&I Activities:			
TRL at start: 5-6	TRL at end: 7-8		
Total budget required: €21m		Flagship:	No

Description of Research and Innovation Activity	DG TWG
Title: EXPLORATION TECHNIQUES (INCLUDING	R&I
RESOURCE PREDICTION AND EXPLORATORY DRILLING)	Activity.5

**Scope:** Improving the precision of pre-drilling exploration and performance prediction by regularly updating methodological approaches. Moving beyond the state of the art by testing new tools, developing new approaches and taking advantage of improved software and computing power, thereby reducing uncertainty and bringing down exploration costs.

#### **Ongoing R&I Activities:**

project DARLINGe:

Danube Region Leading Geothermal Energy, from 01-01-17 to 30/06/2019

Total budget= € 2.525.760,70

EU contribution Interreg= € 2.146.896,60

Private contribution= € 378.864,10

TRL at start: 5-6 TRL at end: 7-8

Total budget required: €49m Flagship: No

Description of Research and Innovation Activity	DG TWG
Title: ADVANCED DRILLING/WELL COMPLETION	R&I Activity.6
TECHNIQUES	

**Scope:** Reduction in drilling/well completion costs. Demonstrate concepts that can significantly reduce drilling/well completion costs (reduce drilling time and non-productive time, reduce costs, mitigate risks) or enhance reservoir performance (including directional and horizontal multilateral drilling). The target is to reduce cost for drilling and underground installations by at least 25% compared to the situation today.

#### **Ongoing R&I Activities:**

#### project Descramble:

Drilling in supercritical geothermal condition, from 01-05-15 to 30-04-18

Total budget= € 15.687.222,50

EU contribution H2020= € 6.753.635,00

Private contribution= € 8.933.587,50

#### project ThermoDrill:

Fast track innovative drilling system for deep geothermal challenges in Europe, from 01-09-15 to 31-08-18 Total budget= € 5.824.745,00

EU contribution H2020= € 5.380.995,00

Private contribution= € 443.750

#### project GeoWell:

Innovative materials and designs for long-life high-temperature geothermal wells, from 01-02-16 to 01-19

Total budget= € 4.704.913,75

EU contribution H2020= € 4.704.913,75

Private contribution= € 0

#### project Geo-Drill:

Development of novel and cost-effective drilling technology for Geothermal Systems, from 1 April 2019 to 30 September 2022

Total budget= € 4 996 400

EU contribution H2020= € 4 996 400

Private contribution= € 0

#### project CAGE:

CAGE is a development and demonstration project of several cost-saving and output-improving installation technologies. The objective is to demonstrate a new concept, suitable for limestone areas and target depths of 1 to 2.5 km. The demonstration contains the following innovations: Crane-based drilling, Enhanced Casing Installation (ECI / ECCI) technology (Casing While Drilling), Lightweight and corrosion-resistant High Strength Composite Casing (HSCC), Acoustic Multi-Sensor Parameter Analysis (MSPA) supported Radial Drilling, Airlift technology to replace the costly Electrical Submergible Pump

Total budget= € 13.457.698,00

Geothermica contribution= € 5.834.888,00

Private contribution= € 7.622.810,00

#### project GECONNECT:

GeConnect aims at increasing the reliability of the downhole construction of geothermal wells beyond the state of the art using flexible couplings

Total budget= € 1.196.126,00

Geothermica contribution= € 868,891

Private contribution= € 327.235

#### project ZoDrEx:

ZoDrEx aims at demonstrating drilling, completion and production technologies increasing technical and economic successes of geothermal projects.

Total budget= € 4.890.706,00

Geothermica contribution= € 2.860.282,00

Private contribution= € 2.030.424

TRL at start: 5 (improvement), 3 (novel)	TRL at end: 7 (improvement), 5 (novel)	
Total budget required: €52.1m	Flagship:	No

Description of Research and Innovation Activity	DG TWG
Title: INTEGRATION OF GEOTHERMAL HEAT AND POWER	R&I Activity.7
IN THE ENERGY SYSTEM AND GRID FLEXIBILITY	

**Scope:** Integration of flexible generation from geothermal power in the energy sector

#### **Ongoing R&I Activities:**

#### project GeoSmart:

Technologies for geothermal to enhance competitiveness in smart and flexible operation, from 01-06-19 to 31-05-23

Total budget= € 19.105.236,25

EU contribution H2020= € 17.363.898,25

Private contribution= € 1.741.338

#### project HEATSTORE:

The main objectives of this project are to lower the cost, reducing the risks and to optimize performance of high temperature (~25 to ~90°C) underground thermal energy storage technologies by demonstrating 6 distinct configurations of heat sources, heat storage, and heat utilization

Total budget= € 16.265.971,00

Geothermica contribution= € 8.305.268,00

Private contribution= € 7.960.703

TRL at start: 4-5 TRL at end: 7-9			
Total budget required: €11.5		Flagship:	Yes

Description of Research and Innovation Activity	DG TWG	
Title: ZERO EMISSIONS POWER PLANTS	R&I	
	Activity.8	
Scope: Increasing the feasibility of closed-loop reinjection and demonstrating the capture of non-		
condensable gases (Zero emission power plants).		
Ongoing R&I Activities:		
project GECO:		

project GECO:

Geothermal Emission Gas Control, from 10-01-18 to 30/09/2022

Total budget= € 18.220.330,50

EU contribution H2020= € 15.599.842,88

Private contribution= € 2.620.487,62

TRL at start: 5-6 TRL at end: 6-7

Total budget required: €123.4m Flagship: Yes

Description of Research and Innovation Activity	
	TWG
Title: INCREASING AWARENESS OF LOCAL COMMUNITIES AND	NTBE-
INVOLVEMENT OF STAKEHOLDERS IN SUSTAINABLE	Α
GEOTHERMAL SOLUTIONS	

#### Scope:

- **A**: Public acceptance: improve community perceptions about non-condensable gas emissions, microseismicity, stimulation, and other environmental effects. Coordination of national and regional regulatory oversight practices for health, safety and environmental aspects of geothermal projects.
- **B**: Best practices for managing health, safety and environmental aspects of geothermal projects. Seismic monitoring and mapping of seismic events, guidelines for stimulation indicators in order to prevent surface impacts.

## Ongoing R&I Activities:

#### project GEOENVI:

Tackling the environmental concerns for deploying geothermal energy in Europe, from 11-01-18 to 30/04/2021

Total budget= € 2.495.871,50 EU contribution= € 2.495.871,50

Private contribution= € 0

#### project CROWDTHERMAL:

Community-based development schemes for geothermal energy, from 01-09-19 to 31/08/2022

Total budget= € 2.305.801,25

EU contribution= € 2. 2.305.801,25

Private contribution= € 0

TRL at start: not applicable	TRL at end: not applicable	
Total budget required: €21m	Flagship:	No

Description of Research and Innovation Activity	
	TWG
Title: RISK MITIGATION (FINANCIAL/PROJECT)	NTBE.B

**Scope:** Coordination of national geological risk mitigation methods and financial schemes (e.g. exploration grants, geothermal guarantee schemes).

#### **Ongoing R&I Activities:**

#### project GEORISK:

Developing geothermal and renewable energy projects by mitigating their risks, from 10-01-18 to 31/03/2021

Total budget= € 2.184.118,38

EU contribution H2020= € 2.184.118,38

Private contribution= € 0

TRL at start: NA	TRL at end: NA	
Total budget required: €177m	Flagship:	No

# Assessment of RD&I activities from geothermal industry in 2019

Significant levels of funding for R&I are coming from industry. A large part of the RD&I from industry is dedicated to innovation and high TRL. The total number of private projects is hard to estimate, but it can be assumed that it represents a third of all RD&I investment for geothermal in Europe.

The variation in R&D efforts among EU Member States also holds true for the R&D expenditure of industries in the geothermal sector. The scale of technologies involved is so vast and the related value chain so complex that it is impossible to identify all private investments at the different stages of geothermal innovation processes.

Crowdfunding (CF) is an emerging alternative source of financing. It refers to open calls to the public, generally via internet platforms, to finance any kind of project. There are four types of CF transactions/relationships:

- Donation: A donor contract without an existing reward = supporter/fan
- Reward: A purchase contract for some type of product or service = client, buyer
- Lending: A credit contract, credit is to be repaid plus interest = creditor
- Equity: A shareholding contract providing shares, equity-like instruments or revenue
- sharing in the project/business = investor

The approach adopted is therefore to estimate the R&D commitments from industry between 2020 and 2030, basing this calculation upon the resources dedicated to R&D on an annual basis.

According to our estimation, the total turnover of geothermal industries in the EU was € 2.7 billion in 2018. Nearly all private R&D investments are currently carried out by material and equipment manufacturers: the turnover generated by the sale of services (e.g. installation, planning, maintenance) has therefore been excluded from the following calculations. The ratio of R&D expenditure to net sales varies significantly, however for most companies this is in the range of 1% to 3%.

RUGGERO BERTANI - EUROPEAN GEOTHERMAL INNOVATION AWARD - 2019 EDITION:

• CLIMEON (Sweden), for the geothermal plant Fludaorka, Iceland, where a HeatPower module of 2x2x2 m and 150 kW can produce electricity from low temperature geothermal resources (80–130°C).

- GEOFLUID (France), for their anti-corrosion well concept implemented at the district heating grid of Bonneuil-sur-Marne, France.
- GPC IP (France), for the validation of the sub-horizontal doublet and reservoir evaluation concept at the district heating system in Cachan, Paris.
- JANSEN AG (Switzerland), for the Jansen HIPRESS borehole heat exchanger for applications in depths of 300+ meters.
- TURBODEN (Italy), for the first 5 stages large axial ORC turbine, as installed on the Velika Ciglena geothermal power plant, Croatia

# RUGGERO BERTANI - EUROPEAN GEOTHERMAL INNOVATION AWARD - 2020 EDITION:

- Bakker Oilfield Supply: Their endorsed project is "Degasser 2.0 rental". This rental product is designed for geothermal projects with temperatures up to 150°C. It is used in almost every Geothermal Project in the Netherlands for separation of fluids like water, gas and oils from each other. With this product, developers are able to separate harmful gases and oils from water and steam. After separation they can safely release steam and water to turbines and/or open air. This type of equipment is not available in the rental market for this range of temperature. The product has been used in a few projects already and has proven its reliability.
- CarbFix: The EU-funded CarbFix project has been selected as one of the five outstanding finalists of the Ruggero Bertani European Geothermal Innovation Awards 2020. The CarbFix process captures CO2 and other sour gases from emission sources. In less than two years, 95% of these gases are transformed into rocks underground. The process was designed to help nature rebalance the carbon cycle by mimicking natural mineralisation of CO2 in favorable rock formations.

A devoted research and innovation team transformed CarbFix from an idea on paper to a proven, reliable process on an industrial scale in less than eight years; an effort led by scientists at the University of Iceland, Columbia University, CNRS and Reykjavik Energy.

CarbFix has large global scaling potential in and beyond the geothermal industry. The plans to apply this technology to sites in Italy, Turkey and

been possible before.

Germany are well underway. The ambition is to become a key instrument in tackling the climate crisis and slashing global CO2 emissions.

- EAVOR-Loop: Up to now deep geothermal closed systems only produced a small amount of energy from mostly vertical single deep wells. The Eavor Loop project overcomes this disadvantage with a concept of vertical wells being connected by several horizontal wells.
   The systems are designed for 40 MW and above, thus converting individual geothermal projects into industrial projects. New technologies are combined and optimised for geothermal energy exploitation in areas and rocks where it has not
- Vulcan Energie Ressource: Lithium is currently produced in open pit and underground mines or from salt flats in South America. The environmental impact is huge in terms of carbon footprint, land use and water consumption. Vulcan's concept is different, as the environmental impact should be minimal. Deep geothermal reservoirs are widespread in the Upper Rhine Graben area. The geothermal brines in these reservoirs contain a large amount of lithium. Vulcan's idea is to extract the lithium from the brine using direct lithium extraction. The lithium will be extracted after the energy of the brine has been used for power and heating production. The energy needed for the extraction is generated directly in the geothermal plant. So the lithium can be produced with zero carbon emissions.

The Direct Lithium Extraction will be implemented in the pilot project based on the requirements of the geothermal brine and to avoid environmental hazards and damages to the brine cycle by scaling or corrosion. But further research must be done to understand the mechanisms in the geothermal reservoirs when the lithium is extracted.

- ZAE Bayern: In shallow geothermal systems, the thermal response test is the
  procedure commonly used to measure thermal underground properties. The
  research project "QEWS II" developed and tested a test rig to ensure the quality
  of thermal response test devices.
  - The test rig emulates the thermal behaviour of a real borehole heat exchanger of different lengths and underground properties.
  - The thermal response test unit is connected to the emulated borehole in the same way as it would be to the real borehole. This way, it reproduces the emulated underground properties with accuracy and can determine whether the unit works correctly.

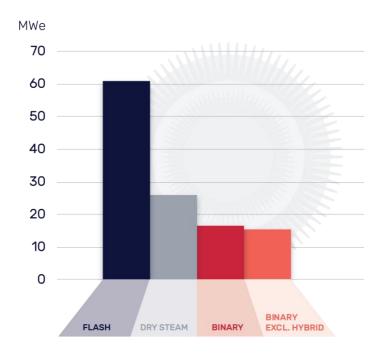

This project is one of a kind. There is not such a test rig available on the market today. Before this device was developed, the only way to compare different thermal response test units was to test them at the same real borehole where the boundary conditions vary, and the underground properties are not perfectly known.

#### EGEC MARKET REPORT 2019

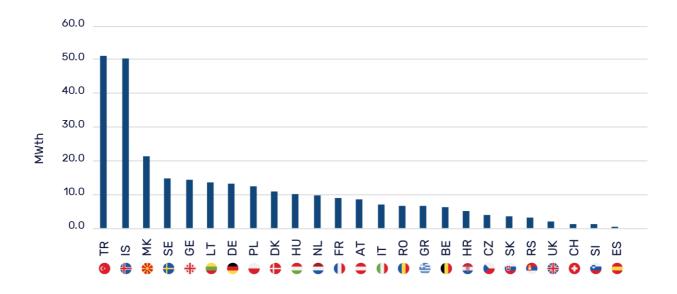

Comparison geothermal electricity average capacity factors in Europe:

Average size of geothermal electricity turbines by types of plants:

Average size of deep geothermal heating and cooling plant per country:

#### NEW R&I PUBLIC FUNDING INSTRUMENTS FOR INDUSTRY

#### Innovation Fund

On 23/09/19, the geothermal workshop on the Innovation Fund saw the presentation of innovative geothermal projects in view of presenting the dynamics of the sector to the EU institutions in charge of managing the Innovation Fund and the Modernisation Fund. Details can be found on the Event website (with presentations)

#### Key priorities for financing geothermal innovation:

The delivery of support must be adapted to the project and actively contribute to bridge the valley of death: i.e. to reduce the financial risk of the project (e.g. milestone based grants can be a solution in some cases)

#### Key priorities of geothermal innovative projects:

Reducing costs (through innovative technologies, standardisation of processes); Identifying new business models: providing flexibility, production of raw materials,...

#### Key innovation presented: New generation of power plants

Zero emission power plant
Modular geothermal CHP systems
Geothermal CHP and seasonal storage
Modular power production units
Deep closed loop systems

#### Key innovation presented: New generation of heat plants

Large scale geothermal DH integration Geothermal use for industry ATES Integration in district heating

#### Key innovation presented: the world race on lithium extraction

A global competition where European geothermal industry needs public support for Geothermal lithium production

# Conclusion

The geothermal sector is a diverse, highly innovative sector, which leads many different types of actors to be engaged in fostering the R&I priorities identified by the SET Plan Implementation Working Group Deep Geothermal. Many of these actors are engaged, usually in partnership with non-industrial actors such as the research communities in public funded projects, for instance programmes such as Horizon 2020 or Geothermica. Meanwhile, as the geothermal sector remains very competitive, industrial actors also often carry out innovation in the various projects they are developing commercially as they seek to decrease the cost of producing geothermal energy. All industrial actors are therefore susceptible to engage in the implementation of the R&I priorities for deep geothermal.

Meanwhile, the geothermal sector, while not necessarily a very concentrated community, remains structured by key organisations and events, which constitute relays of the geothermal industry, where experience sharing happens, and cooperation emerge, fostering innovation. These institutions of the geothermal community are crucial in identifying the key industrial actors of the geothermal sector.
